

Create a Root Web Site Collection for

Apps Deployment

Note: We are creating a root web for the web application to bypass an issue of testing apps which does not have a host web (app part) configured.

1. Create a Root Web

- a. Logon to SharePoint Sever 'MSSP2013' as 'sampledomain\spAdmin'.
- b. Open 'Central Administration'
- c. Under 'Application Management', select 'Create Site Collection'

- d. In the Create Site Collection Page, enter values as shown below:

Create Site Collection

OK

Cancel

Web Application

Select a web application.

Web Application: <http://mssp2013:1234/> ▼

To create a new web application go to [New Web Application](#) page.

Title and Description

Type a title and description for your new site. The title will be displayed on each page in the site.

Title:

Root

Description:

Web Site Address

Specify the URL name and URL path to create a new site, or choose to create a site at a specific path.

URL:

<http://mssp2013:1234/> ▼

To add a new URL Path go to the [Define Managed Paths](#) page.

Template Selection

Select experience version:

2013 ▼

Select a template:

Collaboration Enterprise Publishing Custom

Team Site

Blog

Developer Site

Project Site

Community Site

A place to work together with a group of people.

Primary Site Collection Administrator

Specify the administrator for this site collection. Only one user login can be provided; security groups are not supported.
